2a) The self driving car that originally made by google was purposely made for less accidents on the road and to be more friendly to the environment. Its effects in the automobile world is that there will be no need for gas stations because it is electric and if everyone gets a self driving car there will be no more gas stations.

2b) I used google drawing to make my digital artifact and i used a bunch of pictures from the internet of the flying car and a graph that shows how many people crash per one hundred million miles and to show how safe it is i also used icons for my pros and cons.

2c) One beneficial effect one the self driving car is that it is friendly to the environment and one harmful effect is that the google self driving car is one hundred thousand dollars.

2d) The self driving is still being tested but it will soon be seen on the streets more often and the person inside it while not be driving it but they will be overlooking it incase something happens.

2e) http://www.alphr.com/cars/7038/how-do-googles-driverless-cars-work This website tells me how the self driving car works and one thing i learned about this website about the self driving car is that it has eight sensors.

http://www.latimes.com/nation/la-na-car-crash-spike-20150910-story.html This website tells me how many crashes there have been in California. One thing i learned is that 60% of teens crash.

https://www.theguardian.com/technology/2016/jun/08/self-driving-car-legislation-drones-data-security This website tells me that U.S states are trying to regulate self driving cars and over looking the safety. One thing that i learned is that the U.S wants these self driving car.
